Nirvana García Vásquez, Software Engineer Lima, Peru

nirvagarciav@gmail.com | +51 986 689 120 | https://www.linkedin.com/in/nirvana-garcia/

Software Engineer with 2.6+ years of experience building enterprise systems at scale and delivering digital products used in production environments. Specialized in backend development and modern web applications, integrating AI agents and RAG pipelines into solutions that support automation and decision-making processes. Experienced with cloud platforms and scalable architectures, ensuring systems are reliable, secure, and capable of handling growing workloads. Strong focus on translating complex requirements into practical solutions that improve operations, reduce manual effort, and deliver measurable results.

Work Experience

AI & Software Engineer | LARAIGO Feb 2025 – Present

- Architect and scale Generative AI ecosystems, including agentic workflows, Laraigo Copilot, and custom chatbots. Implement RAG pipelines, multi-LLM orchestration (OpenAI, Watsonx, Ollama), and advanced prompt engineering with tool-calling and semantic search for high-precision enterprise automation.
- Engineer modular backend services with NestJS and TypeScript, focusing on SOLID principles and maintainable API design. Implement security through JWT, RBAC, and encryption, while handling high-volume data (1M+ records) via optimized batch processing and asynchronous tasks.
- Build high-performance frontends using React, Redux, and TypeScript, implementing SSR/SSG for optimization and ensuring data integrity with Zod and React Hook Form under a modular architecture.
- Manage data infrastructure using PostgreSQL for relational storage and ChromaDB for vector search, optimizing indexing and semantic retrieval for Generative AI workflows.

AI & Full-Stack Developer | LARAIGO Oct 2023 – Feb 2025

- Contributed to the full-stack evolution of Laraigo platform, developing scalable UI components and RESTful services. Focused on optimizing cross-module integration and system reliability, ensuring high-performance data flow and consistency across the entire application environment.
- Spearheaded the integration of local and cloud-based LLMs, managing Ollama server optimizations to improve inference speed while implementing foundational solutions with OpenAI and Watsonx. Developed prompt engineering frameworks and model tuning strategies to enhance automated response accuracy.
- Build location-based features using Google Maps API, implementing spatial logic and polygon-based tracking to solve specific logistics and geofencing requirements for clients.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, Java
- **Frameworks:** FastAPI, Django, Flask, NestJS, React.js, Next.js, Express.js, Spring Boot, Node.js
- **AI & LLM Engineering:** RAG Architecture, OpenAI, IBM Watsonx, Ollama, LangChain, Hugging Face
- **Cloud & DevOps:** AWS, GCP, Docker, Git, GitHub Actions (CI/CD)
- **Databases & ORMs:** PostgreSQL, ChromaDB (Vector DB), Firebase, MongoDB, Prisma ORM

Education

Peruvian University of Applied Sciences (UPC) Mar 2021 – Dec 2025

Software Engineering

Bachelor of Engineering | Top 10%

Certifications

- **Machine Learning with TensorFlow on Google Cloud** Sep 2023
- **Scrum Master Certification** Mar 2023

Languages

- **Spanish:** Native
- **English:** B2 First, Cambridge
